CONTACT US

Aussie Buckets has launched its new Performance Range of excavator attachments, featuring cutting-edge technology and innovative designs that create world-class machine efficiency and precise material handling for various applications. With a focus on durability and longevity, the performance range is built to last and perform at the highest level.

Say **No** To Markups.

As a fundamental part of society, operators in the excavation industry deserve to be looked out for.

Aussie Buckets specializes in offering an extensive selection of robust and durable excavator grabs and buckets designed for heavy-duty applications.

Our product range includes 100% customized attachments that are compatible with major OEM brands such as Cat, Komatsu, JCB, and Kubota. With over 102 pickup locations across the nation, a 5-year industry-leading warranty, and lifetime after-sales support, we are committed to providing the highest level of customer satisfaction.

Aussie Buckets boasts a team of highly skilled and experienced engineers who are proficient in designing and fabricating attachments that are custom-built to meet the specific requirements of your machine.

As a leading supplier of attachments in Australia, we pride ourselves on using top-quality materials and cutting-edge technology to deliver superior products that are capable of withstanding the challenging conditions of Australian landscapes.

Our Story.

A mission to provide hard-working Australian operators with high-quality products at a fair price.

Aussie Buckets, established in 2018, is a subsidiary of the Kuzmich Watts & Tomich Group Pty Ltd Company. Our inception was driven by the need to offer Australian operators reliable and high-quality products at fair and competitive prices.

Our attachments are crafted to the highest quality standards and constructed using heavy-duty materials, thanks to our global manufacturing capabilities. With rigorous design and testing in the most demanding environments, you can trust that our attachments are built to endure the challenging landscapes of Australia.

Not only do we prioritize durability and performance, but we also offer cost-effective solutions that can save you thousands in upfront costs. Join the movement and say NO to unjustified markups by choosing Aussie Buckets for your attachment needs. Experience the difference in quality, reliability, and affordability with us.

Why Choose Aussie Buckets?

Aussie Buckets is a reputable provider of premium heavy-duty excavator grabs and buckets. Our extensive range of attachments are fully customizable to suit all major OEM brands, including Cat, Komatsu, JCB, and Kubota, ensuring a perfect fit for your specific equipment.

With a vast network of 102+ pickup locations across the nation, we are committed to making our products easily accessible to our valued customers. In addition, our attachments are backed by a comprehensive 5-year warranty, providing peace of mind and assurance of our commitment to quality.

At Aussie Buckets, we go beyond just selling attachments - we provide lifetime after-sales support to our customers. Our team of experts is readily available to assist with any queries, concerns, or technical assistance, ensuring a seamless experience throughout the lifetime of your attachment.

We take pride in offering affordable excavator attachments without compromising on quality or performance. We believe that hard-working Aussies deserve the best, and it's our mission to deliver exceptional products that meet their needs and exceed their expectations.

Choose Aussie Buckets for superior excavator attachments that are tailored to your requirements, backed by reliable warranty and lifetime after-sales support. Experience the difference in quality and service with our dedicated team.

CORE VALUES

We pride ourselves in delivering exceptional quality, unmatched customer service, and relentless commitment to innovation and excellence.

► 5-YEAR WARRANTY

Our 5-year industry-leading warranty, provided with every excavator attachment, offers unparalleled peace of mind, assuring our customers of the durability, reliability, and quality of our products for an extended period of time.

► LIFETIME SUPPORT

Our lifetime after-sales support guarantees ongoing assistance and technical guidance to our customers, ensuring a seamless experience and maximizing the lifespan of our excavator attachments.

► LARGEST RANGE IN AUSTRALIA

As the leading provider in Australia, we boast the largest and most comprehensive range of excavator attachments, offering a wide selection of options to cater to various applications and equipment brands.

► 100% PURPOSE BUILT

Our attachments are exclusively designed and fabricated 100% purpose-built to meet the unique requirements of our customers, ensuring optimal performance and satisfaction with our products.

Manufacture & Delivery.

Our extensive product range is meticulously engineered to excel in the most challenging environments, and our reputation as a trusted provider of durable and dependable materials handling equipment is widely recognized in the industry.

MANUFACTURE

In the first four weeks, you'll receive updates at the following milestones; 50% production progress and 100% production completed alongside product photos.

IMPORT

Following fabrication completion, we promptly arrange shipment from our factory to Melbourne Port. The next update will be sent following confirmation of its departure.

TRANSIT

Under normal circumstances, the voyage is anticipated to take approximately three weeks, with an additional week allocated for port clearance and arrival at our Victorian distribution warehouse.

DELIVERY

Following any balances being settled, we arrange delivery with one of our local freight companies, sending the attachment directly to your work-site or one of our 102+ pick-up locations nationwide.

OVERVIEW

We take pride in our unwavering dedication to delivering unparalleled quality, exceptional customer service, and relentless commitment to innovation and excellence.

We take pride in our performance range attachments, which are crafted using premium materials sourced from industry-leading international suppliers. Our unwavering commitment to quality is evident in our unmatched priority service, ensuring prompt and efficient customer support.

High Performance Rock Breaker.

Available for 0.8 - 140T

Our High Performance Rock Breaker is a powerful and reliable demolition tool designed for heavy-duty applications in construction, mining, and quarrying. It is engineered with advanced features such as high impact force, precision control, and operator-oriented design to deliver maximum efficiency, productivity, and safety during demolition work. With superior performance, durability, and ease of maintenance, our High Performance Rock Breaker is an essential tool for any demolition job that requires breaking through tough materials such as rock and concrete.

QUICK QUOTE

Features

Minimised Welding With Bracket Fabrication

By minimising welding with bracket fabrication, we have been able to create a rock breaker that is more robust and less susceptible to wear and tear. This is achieved by using high-quality steel and precision engineering techniques to create strong, durable brackets that are attached using minimal welding. The minimised welding also ensures that the rock breaker is less prone to cracking and other types of damage that can result from the welding process.

2 Step Stroke & Idle Blow Prevention

The 2 step stroke & Idle blow prevention production feature is a significant enhancement for our High-Performance Rock Breaker, providing greater precision and control during demolition work. This feature enables the rock breaker to deliver high impact force in a controlled manner, resulting in improved productivity and reduced wear and tear on the machine.

Valve Structure

The internal control valve system in our High Performance Rock Breaker ensures high efficiency and low heat generation, thanks to its large oil path. This design not only enhances the overall performance of the equipment but also allows for an increased allowable back pressure, making it more adaptable to varying work conditions.

1 Stable Support System

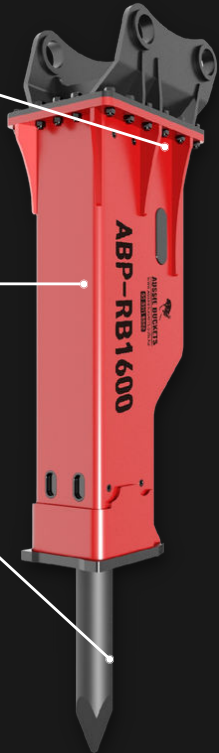

The stable support system is a production feature that offers significant advantages for our High Performance Rock Breaker. This innovative feature effectively prevents vibration between the power cell and bracket, resulting in reduced noise levels and minimised screw loosening caused by vibrations. This advanced system ultimately ensures stable and efficient operation during demanding rock-breaking tasks.

2 Larger Capacity Accumulator

The bigger capacity accumulator is a key production feature that enhances the performance and reliability of our High-Performance Rock Breaker. This feature allows the rock breaker to store and deliver greater amounts of energy, resulting in higher impact force and improved productivity. This results in smoother operation, reduced wear and tear on components, and a lower need for maintenance, ultimately benefiting the end-user in comparison to competitor breakers.

3 Longer Chisel Pin & Larger Through Bolt

The longer chisel pin enables the rock breaker to penetrate deeper into tough materials, while the bigger through bolt enhances the overall structural integrity and strength of the rock breaker. This ensures that the machine is capable of withstanding the rigours of demanding rock breaking applications, reducing downtime and maintenance costs.

5 YEAR WARRANTY

EXTREME ROCK BREAKER PERFORMANCE

Our High Performance Rock Breaker is a powerful and reliable demolition tool designed for heavy-duty applications in construction, mining, and quarrying.

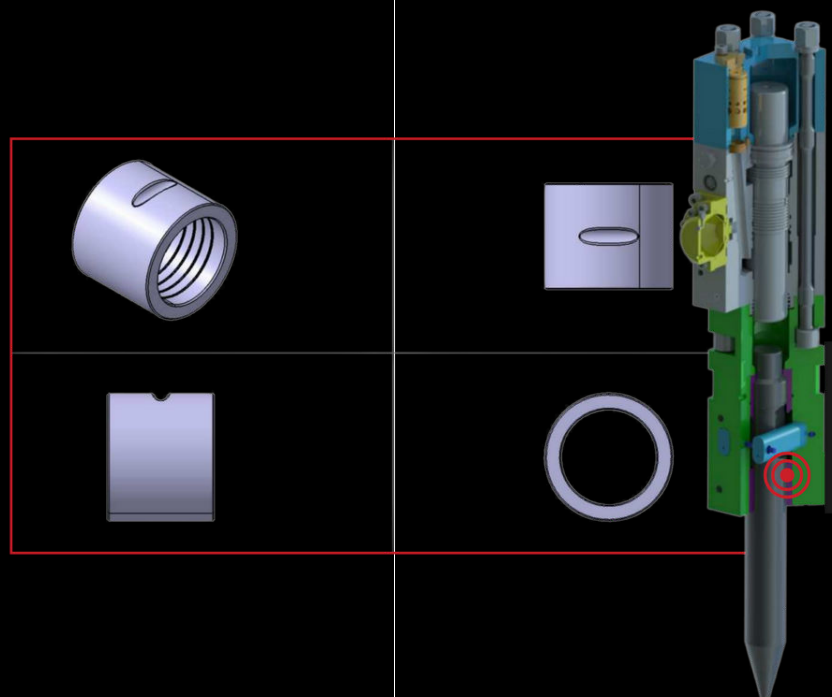

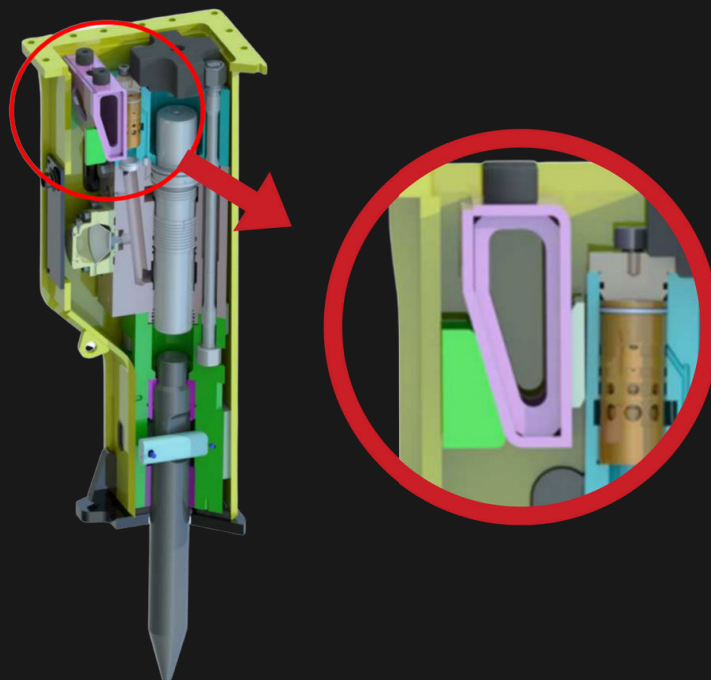

It is engineered with advanced features such as high impact force, precision control, and operator-oriented design to deliver maximum efficiency, productivity, and safety during demolition work.

With superior performance, durability, and ease of maintenance, our High Performance Rock Breaker is an essential tool for any demolition job that requires breaking through tough materials such as rock and concrete.

The Stable Support System is a crucial product feature of our High Performance Rock Breaker, designed to optimise performance and enhance user experience.

By preventing vibration between the power cell and bracket during assembly, this advanced support system ensures the rock breaker remains secure and stable throughout even the most demanding demolition tasks.

Customers can expect several tangible benefits from this innovative feature.

The innovative Front Cover Design of our High Performance Rock Breaker exemplifies our dedication to providing customers with superior quality products that are both functional and durable.

Our front cover boasts a unique round shape, as opposed to the traditional angulate design found in other rock breakers.

This intentional design choice was made to prevent cracking and enhance the overall longevity of the equipment.

Customers can expect several advantages from this advanced Front Cover Design.

Firstly, the round shape significantly reduces stress concentrations, which often lead to cracks in angulate-shaped covers.

As a result, the rock breaker is less prone to damage and has a longer service life, reducing downtime and minimising maintenance costs. Furthermore, the improved durability of the Front Cover Design ensures that our High Performance Rock Breaker can consistently deliver exceptional performance, even under the most demanding conditions.

MINIMAL MAINTENANCE & DOWNTIME

ADVANCED CONTROL VALVE DESIGN

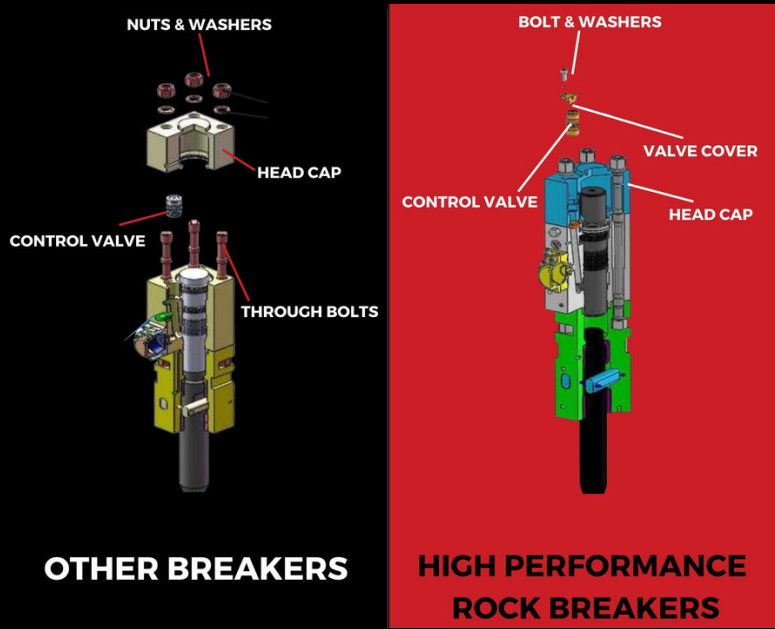

The Control Valve Design of our High Performance Rock Breaker is a testament to our commitment to providing customers with user-friendly and efficient solutions for their construction needs. This innovative feature allows for on-site handling and replacement of the control valve, without the need to disassemble the entire rock breaker, plus no loss of oil.

Customers can expect a range of practical benefits from this advanced Control Valve Design. Firstly, the simplified replacement process reduces downtime and maintenance-related costs, as the control valve can be easily accessed and replaced on-site.

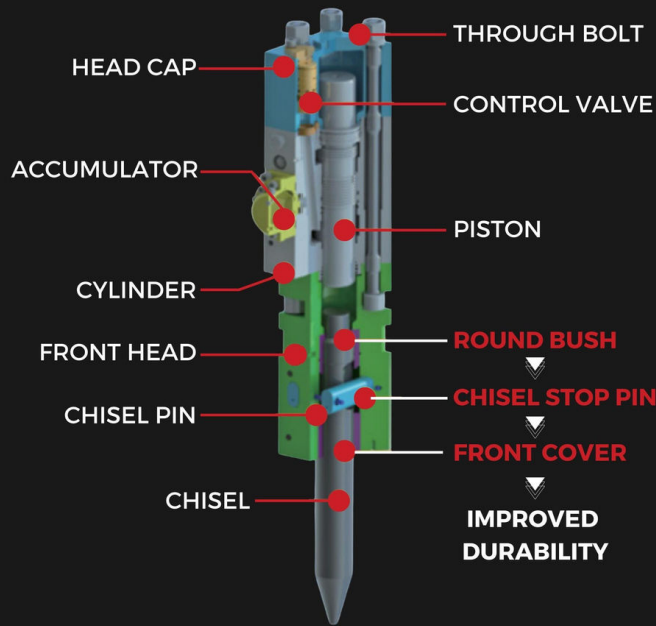

This streamlined procedure ensures that the excavator oil levels remain stable, maximising the efficiency of the equipment during operation.

Additionally, the design minimises loosening caused by vibration during operation, as it does not require the disassembly of through bolts.

This translates to a more stable and reliable performance, as well as reduced wear and tear on the hydraulic breaker's components.

HIGH PERFORMANCE BREAKER BREAKDOWN

Our High Performance Rock Breaker is a prime example of Durability Focused Engineering, integrating an array of meticulously designed internal components that work together to ensure robustness and longevity in the toughest working conditions.

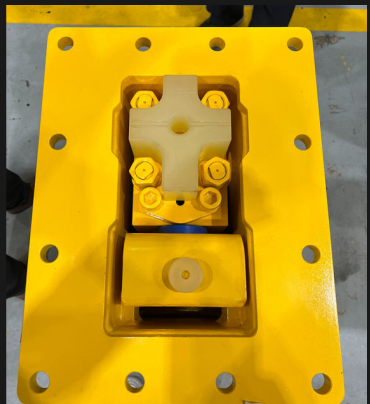

The key elements of this engineering approach include Bigger Through Bolts, which enhance structural integrity and stability, and a Control Valve that is conveniently accessible from the head cap, allowing for easy maintenance, reduced downtime, and increased productivity.

Furthermore, the rock breaker is equipped with a Bigger Capacity Accumulator that ensures smooth operation, reduced wear on components, and improved energy efficiency. This feature also helps to minimise oil pulsation and prolong the life of the diaphragm. The Longer Chisel & Chisel Stop Pin provide increased penetration and durability in demanding applications.

The Round Bush, another vital component, is designed to offer enhanced durability and reduced maintenance requirements, ensuring that the rock breaker performs optimally for an extended period. The innovative Front Cover Design, with its rounded shape, helps prevent cracks and potential structural damage.

All of these features are skillfully engineered and seamlessly integrated into our High Performance Rock Breaker with one overarching goal in mind: to increase user profitability and convenience. By prioritising durability-focused engineering, we deliver a reliable and long-lasting solution that not only meets but exceeds the expectations of professionals in the industry.

MAXIMISE YOUR PROFITABILITY

Partnering With **AY HEAVY.**

At Aussie Buckets, our dedication to providing outstanding quality and performance in our products is unwavering.

We are excited to reveal our collaboration with AY Heavy Industries Co., Ltd. for the fabrication and production of our latest High Performance Rock Breaker, a groundbreaking addition to our Performance Range.

AY Heavy boasts a remarkable history of excellence within the heavy machinery sector, concentrating on quality, performance, and state-of-the-art technology.

Since its inception in 2015, AY Heavy has swiftly garnered recognition for their extraordinary products, earning ISO9001 and ISO14001 certifications, numerous patents, and CE certification.

They have also been chosen as an 'Export Frontier Enterprise,' further cementing their status as a top-tier manufacturer in the industry.

Their alliances with renowned brands such as JCB, Volvo, Okada, and John Deere provide additional evidence of their expertise and market credibility.

We are confident that AY Heavy's commitment to producing high-caliber equipment, combined with their robust focus on innovation, renders them the ideal collaborator for our High Performance Rock Breaker.

In unison, we will propel the industry forward by delivering exceptional products that surpass expectations and establish new benchmarks in performance, longevity, and efficiency.
