Aussie Buckets has launched its new Performance Range of excavator attachments, featuring cutting-edge technology and innovative designs that create world-class machine efficiency and precise material handling for various applications. With a focus on durability and longevity, the performance range is built to last and perform at the highest level.

Say **No** To Markups.

As a fundamental part of society, operators in the excavation industry deserve to be looked out for.

Aussie Buckets specializes in offering an extensive selection of robust and durable excavator grabs and buckets designed for heavy-duty applications.

Our product range includes 100% customized attachments that are compatible with major OEM brands such as Cat, Komatsu, JCB, and Kubota. With over 102 pickup locations across the nation, a 5-year industry-leading warranty, and lifetime after-sales support, we are committed to providing the highest level of customer satisfaction.

Aussie Buckets boasts a team of highly skilled and experienced engineers who are proficient in designing and fabricating attachments that are custom-built to meet the specific requirements of your machine.

As a leading supplier of attachments in Australia, we pride ourselves on using top-quality materials and cutting-edge technology to deliver superior products that are capable of withstanding the challenging conditions of Australian landscapes.

Our Story.

A mission to provide hard-working Australian operators with high-quality products at a fair price.

Aussie Buckets, established in 2018, is a subsidiary of the Kuzmich Watts & Tomich Group Pty Ltd Company. Our inception was driven by the need to offer Australian operators reliable and high-quality products at fair and competitive prices.

Our attachments are crafted to the highest quality standards and constructed using heavy-duty materials, thanks to our global manufacturing capabilities. With rigorous design and testing in the most demanding environments, you can trust that our attachments are built to endure the challenging landscapes of Australia.

Not only do we prioritize durability and performance, but we also offer cost-effective solutions that can save you thousands in upfront costs. Join the movement and say NO to unjustified markups by choosing Aussie Buckets for your attachment needs. Experience the difference in quality, reliability, and affordability with us.

Why Choose Aussie Buckets?

Aussie Buckets is a reputable provider of premium heavy-duty excavator grabs and buckets. Our extensive range of attachments are fully customizable to suit all major OEM brands, including Cat, Komatsu, JCB, and Kubota, ensuring a perfect fit for your specific equipment.

With a vast network of 102+ pickup locations across the nation, we are committed to making our products easily accessible to our valued customers. In addition, our attachments are backed by a comprehensive 5-year warranty, providing peace of mind and assurance of our commitment to quality.

At Aussie Buckets, we go beyond just selling attachments - we provide lifetime after-sales support to our customers. Our team of experts is readily available to assist with any queries, concerns, or technical assistance, ensuring a seamless experience throughout the lifetime of your attachment.

We take pride in offering affordable excavator attachments without compromising on quality or performance. We believe that hard-working Aussies deserve the best, and it's our mission to deliver exceptional products that meet their needs and exceed their expectations.

Choose Aussie Buckets for superior excavator attachments that are tailored to your requirements, backed by reliable warranty and lifetime after-sales support. Experience the difference in quality and service with our dedicated team.

CORE VALUES

We pride ourselves in delivering exceptional quality, unmatched customer service, and relentless commitment to innovation and excellence.

► 5-YEAR WARRANTY

Our 5-year industry-leading warranty, provided with every excavator attachment, offers unparalleled peace of mind, assuring our customers of the durability, reliability, and quality of our products for an extended period of time.

► LIFETIME SUPPORT

Our lifetime after-sales support guarantees ongoing assistance and technical guidance to our customers, ensuring a seamless experience and maximizing the lifespan of our excavator attachments.

► LARGEST RANGE IN AUSTRALIA

As the leading provider in Australia, we boast the largest and most comprehensive range of excavator attachments, offering a wide selection of options to cater to various applications and equipment brands.

► 100% PURPOSE BUILT

Our attachments are exclusively designed and fabricated 100% purpose-built to meet the unique requirements of our customers, ensuring optimal performance and satisfaction with our products.

Aidan Kuzmich
MANAGING DIRECTOR

A. Kuzmich

Manufacture & Delivery.

Our extensive product range is meticulously engineered to excel in the most challenging environments, and our reputation as a trusted provider of durable and dependable materials handling equipment is widely recognized in the industry.

MANUFACTURE

In the first four weeks, you'll receive updates at the following milestones; 50% production progress and 100% production completed alongside product photos.

IMPORT

Following fabrication completion, we promptly arrange shipment from our factory to Melbourne Port. The next update will be sent following confirmation of its departure.

TRANSIT

Under normal circumstances, the voyage is anticipated to take approximately three weeks, with an additional week allocated for port clearance and arrival at our Victorian distribution warehouse.

DELIVERY

Following any balances being settled, we arrange delivery with one of our local freight companies, sending the attachment directly to your work-site or one of our 102+ pick-up locations nationwide.

OVERVIEW

We take pride in our unwavering dedication to delivering unparalleled quality, exceptional customer service, and relentless commitment to innovation and excellence.

We take pride in our performance range attachments, which are crafted using premium materials sourced from industry-leading international suppliers. Our unwavering commitment to quality is evident in our unmatched priority service, ensuring prompt and efficient customer support.

UNMATCHED PRIORITY SERVICE & SUPPORT

Vibrating Pile Driver.

Available for 18 - 45T

The Vibrating Pile Driver is an innovative piece of equipment that offers a significant advantage in pile driving operations, greatly reducing the time required to complete the job. The machine's 90-degree tilting and rotating head enable it to pick up sheet piles in a horizontal position and easily position piles, minimising the need for manual interference. As a result, the operator can perform almost non-stop piling operations, significantly reducing the cycle time required to complete the work compared to basic types of pile drivers. These features enhance the overall efficiency and productivity of the pile-driving process, ultimately resulting in cost savings for the project.

Features

Low Friction

Low friction is essential for the Vibrating Pile Driver as it helps minimize wear and tear, reduce energy consumption, and improve the overall efficiency of the machine. When driving piles, friction can cause a significant amount of energy loss, leading to reduced efficiency and productivity. By reducing the amount of friction, the machine can transmit more energy to the pile, driving it into the ground more effectively and efficiently.

High Quality Electrical Harness

The high-quality electrical harness is a critical component that interconnects the electrical system of the machine, including its sensors, motors, and controllers. The harness is meticulously designed and assembled to ensure reliable and efficient transmission of electrical signals, free from any interference or disruptions. The use of a well-designed electrical harness promotes high machine uptime and reliability, improved safety, and increased productivity by enabling faster fault detection and easier maintenance.

Robust Construction

The incorporation of hardened pins and larger bushes in the manufacturing process results in a reduction of the overall torsional tension and provides maximal support, thereby prolonging the lifespan of the Vibrating Pile Driver.

1 360-Degree Rotating Function

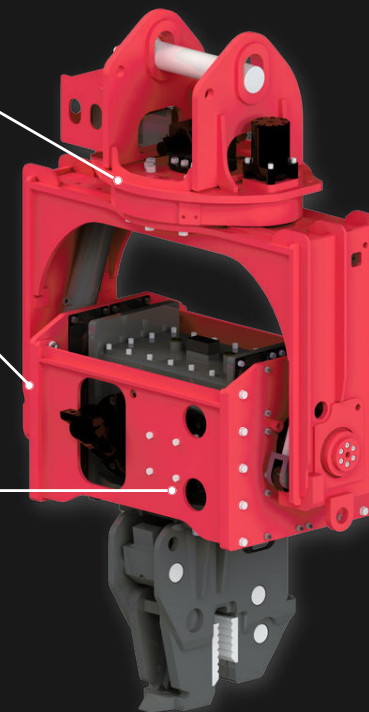

The 360-degree rotating function provides significant benefits in terms of efficiency, safety, and versatility. This feature enables the operator to position the machine and pile in the optimal direction, regardless of the excavation site's angle or position. By reducing the need for repositioning the machine or pile, this function can save time and effort, improving the machine's overall efficiency.

2 90-Degree Tilting Function

The equipment boasts a 90-degree tilting function, which facilitates the horizontal pick-up of sheet piles, reducing the requirement for manual interference during the pile-driving process.

3 Heavy Duty Cylinder

For the Vibrating Pile Driver, the heavy-duty cylinder is a critical component that plays a vital role in generating the high-frequency vibrations necessary to drive piles into the ground effectively. The heavy-duty cylinder's robust construction ensures that it can withstand the high forces generated during the pile-driving process, enabling the machine to operate reliably and efficiently over extended periods.

5 YEAR
WARRANTY

PILE ON THE VERSATILITY

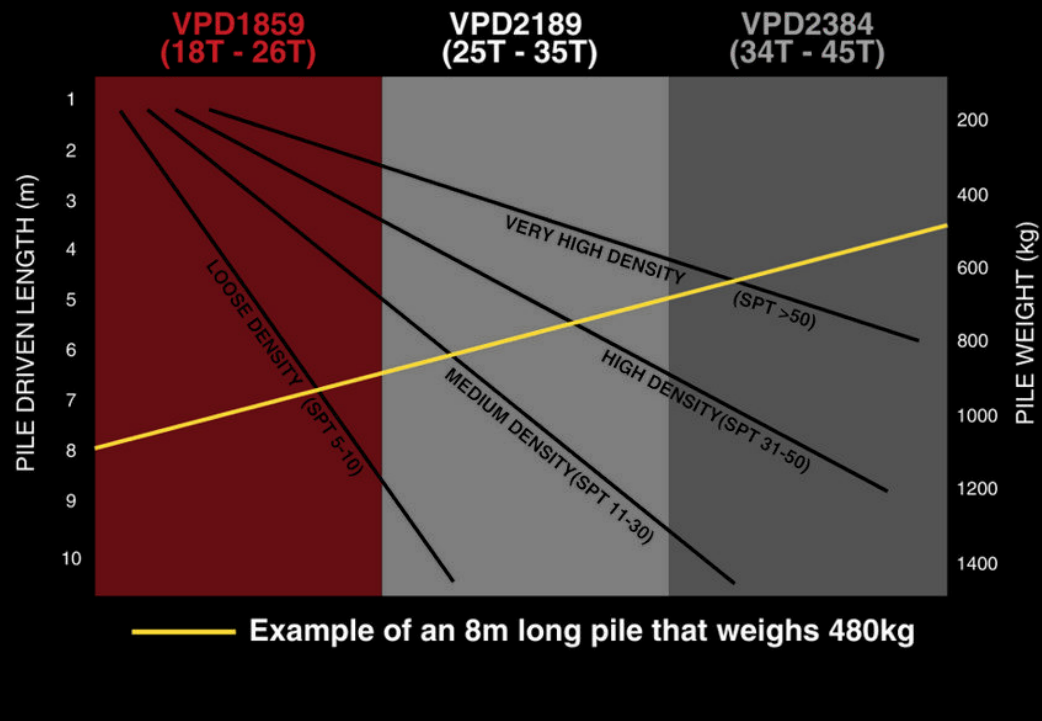

The Vibrating Pile Driver is a highly versatile piece of equipment that can handle a wide range of ground densities, making it a top choice for many construction projects.

With its advanced features, the Vibrating Pile Driver is capable of driving piles quickly and efficiently, even in challenging ground conditions.

Its 360-degree rotating and 90-degree tilting functions make it highly flexible, enabling the operator to position the machine and pile in the optimal direction, even in tight spaces.

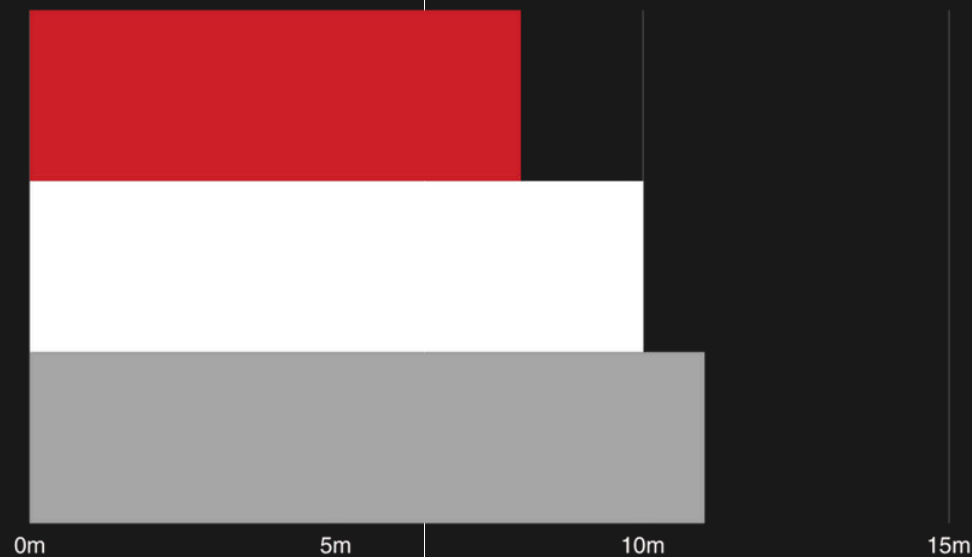

As shown in the example on the graph, when driving an 8m long pile, depending on the ground density, would decide which size Vibrating Pile Driver attachment will be most efficient and effective for the job.

In this example, for loose ground types the smaller VPD1859 would be suitable in comparison to very dense ground where the VPD2384 would be more suitable.

DRIVING LENGTH OF SHEET PILE

■ VPD1859 (18T - 26T) ■ VPD2189 (25T - 35T) ■ VPD2384 (34T - 45T)

The Vibrating Pile Driver is a revolutionary piece of equipment that has transformed the way pile driving operations are carried out.

This innovative attachment is designed to offer significant advantages in terms of efficiency, productivity, and safety compared to traditional piledrivers.

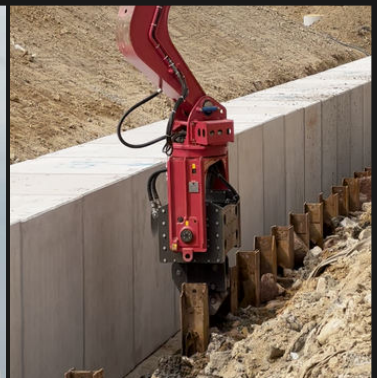

One of the most notable features of the Vibrating Pile Driver is its ability to minimize the need for manual interference during the pile-driving process.

The machine's 90-degree tilting and 360-degree rotating functions enable it to pick up sheet piles in a horizontal position, significantly reducing the requirement for manual intervention.

This feature allows the operator to perform almost non-stop piling operations, greatly reducing the cycle time required to complete the work compared to basic types of pile drivers.

By investing in innovative equipment, customers can expect to complete their pile-driving projects with greater ease, speed, and precision, ultimately resulting in significant cost savings.

DRIVE YOUR PRODUCTIVITY SKY HIGH

Partnering With **BULLSTERN.**

At Aussie Buckets, we take immense pride in our unwavering commitment to providing our valued customers with the finest excavator attachments available in the market.

To achieve this, we understand that partnering with industry-leading manufacturers is of paramount importance.

In our pursuit of excellence, we have scoured the globe to identify the most reputable and reliable manufacturers of excavator attachments.

After a meticulous vetting process, we are delighted to have chosen Bullstern as our trusted partner for the manufacture and production of our new performance range's Vibrating Pile Driver and Vibrating Ripper attachments.

Bullstern, a Korean-based manufacturer, shares our unwavering commitment to crafting superior-quality products through the use of advanced manufacturing and engineering processes.

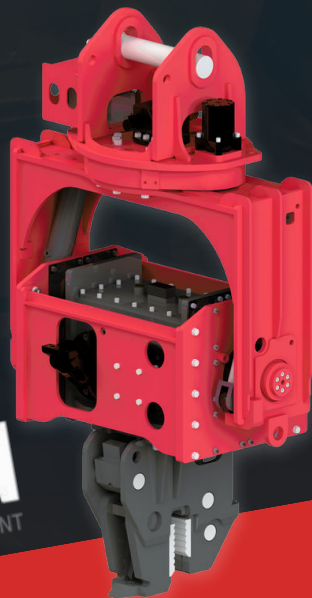

Their dedication to precision and attention to detail is evident throughout the entire production process - from design and construction to testing and delivery.

This ensures that every attachment produced by them meets or exceeds the stringent quality standards that our customers have come to expect from us.

We firmly believe that our customers will appreciate the exceptional quality and performance of our new performance range attachments, which are built to last and deliver optimal results.

By collaborating with Bullstern, we are confident that we have made the right choice in terms of ensuring the highest level of quality, reliability, and durability for our Vibrating Pile Driver and Vibrating Ripper attachments.

With Bullstern as our trusted partner, we are well-equipped to continue providing our customers with the top-quality excavator attachments that they have come to rely on from Aussie Buckets.

Bullstern Company Background

Bullstern has an impressive company background. S & C Co. Ltd., a group specializing in the production of front actuators for construction equipment, has been a successful strategic partner with DOOSAN (previously DAEWOO) since 2000. Additionally, their technical know-how led to an OEM product contract with OKADA in Japan since 2010, opening new prospects for their own brand attachment business named Bullstern.

The company started when DAEWOO Group sold or separated its affiliates, and Jin, the current owner of S&C, joined hands with 30 DAEWOO Heavy Industries employees to start manufacturing DAEWOO (DOOSAN's predecessor) excavator parts. Exactly five years after starting the business at a factory in DAEWOO Heavy Industries, the current S & C Co., Ltd. offices and factories located in Dohwa-Dong, Incheon, were established and moved in, becoming completely independent of DAEWOO.

Bullstern's journey, vision, and mission are defined by their motor of sincerity and challenge. With this approach, their mission is to become a global top-tier manufacturer for excavator-mounted attachments specialized in vibro attachments.

Their top engineers are impressive as well. More than 30% of all employees are from DAEWOO, and most of them have worked for over 20 years. Mr. Yu, the vice president, is an expert on steel structures and is deeply involved from the design stage of all attachments developed by S & C Co., Ltd. This is why their attachments maintain high durability and a long service life compared to others.

Mr. Yu
VICE PRESIDENT

Our products are unparalleled in the market, owing to a multitude of reasons. Firstly, our adept workforce, with over two decades of experience, is well-equipped with cutting-edge manufacturing technology and expertise spanning steel cutting to final assembly. This endows us with the capability to maintain consistent quality in our attachments and tackle any issues in-house, without the need for outsourcing.

Secondly, we prioritize proven performance and quality through a meticulous process of local testing and customer feedback. This approach aids us in identifying and addressing any defects or usability issues that may have been overlooked during the design phase. This sets us apart from many Korean heavy equipment companies with export-oriented businesses, who often neglect the significance of field testing or launch their products into overseas markets without adequate testing.

Lastly, we value rapid delivery and responsiveness to our customers. Our swift delivery times and substantial inventory levels of consumables, owing to our in-house manufacturing process, differentiate us from our competitors. This helps us ensure timely and dependable delivery of our products to our customers.
