# Cable Bucket

AVAILABLE FOR 3-24 T

Introducing the Cable Bucket, a versatile and robust solution engineered to meet the diverse needs of modern excavation and material handling.

Available in two distinct variants—the Cable Bucket with Teeth and the Cable Bucket with a cutting edge—this product ensures customers have the optimal tool for their specific applications.

The innovative dual radius design maximises breakout force and cycle times, while its elongated belly supports effective compaction tasks, offering unmatched flexibility. Crafted for durability, the Cable Bucket features a construction of Hardox 500 and high-strength SM490 Steel,

delivering exceptional longevity and abrasion resistance. Enhanced with underbelly wear strips and reinforced plating, it provides superior wear protection. Its lightweight and narrow design, tailored to tonnage, allows operation in tight access areas with minimal soil displacement, reducing backfilling requirements. This design also minimises machine strain, improves fuel efficiency, and accelerates cycle times.

Backed by our industry-leading 5-year warranty, the Cable Bucket combines cutting-edge engineering with reliability, setting a new standard for performance and durability in the field.

### Features

#### Multiple Variations

Coming in two different variants including the Cable Bucket with Teeth and the Cable Bucket which will utilise a cutting edge. This is ensuring the customer has the best solution for their use case.

#### Dual Radius Design

Designed with multiple use in mind, the dual radius design for maximum breakout force and cycle times but also allowing for compaction tasks with the elongated belly.

#### Durable Construction

Built with Hardox 500 and High Strength SM490 Steel for longevity and abrasion resistance. Equipped with underbelly wear strips and reinforced plating to enhance the wear protection and resistance even more.

#### Light Weight and Narrow Design

A narrow build, tailored to tonnage, enables use in tight access areas with minimal soil displacement, reducing backfilling needs. Its lightweight design lowers machine strain, boosts fuel efficiency, and enhances cycle times.
